Abstract:

PROBLEM TO BE SOLVED: To provide an electronic mail system in which an electronic mail addressed to its own address is automatically received in real time.

SOLUTION: Upon the receipt of an electronic mail from a transmitter side communication terminal 400, an electronic mail server 100 stores the electronic mail and address information to a storage section 100. Then a retrieval section 130 retrieves an address information/telephone number management section 120 based on the received address information to retrieve a telephone number registered corresponding to the address information. Then an automatic distribution section 140 makes transmission by the retrieved telephone number to distribute automatically the electronic mail to a receiver side communication terminal 500. The receiver side communication terminal 500 stores the electronic mail received by the automatic distribution of the electronic mail server 100 to a storage section and displays it on a display section.
